A measurement system is an

Read PDF Principles Of Measurement Systems

Information system which presents an observer with a numerical value corresponding to the variable being measured. A given system may contain four types of element: sensing, signal conditioning, signal processing and data presentation elements. The book is divided into three parts. Part A(Chapters 1 to 7)examines general systems principles.

Principles Of Measurement Systems Solutions

Solution: According to the text book, the solution should be... $E(400) = 20869 \times 10^{-6} \text{ V} = 400 \cdot K = ?$ $K = \frac{20869}{400} \text{ V/C} = 52.17 \text{ } \mu\text{V/C}$. This gives the equation for the ideal straight line as: $E_L(T) = 52.17 \cdot T$ (in μV). However, the example in the book is wrong, so a better solution would be based on $E(400) = 22131 \times 10^{-6} \text{ V}$, which gives K
