## ~~CHAPTER 1 - PROBLEM SOLUTIONS~~

Solutions Day 1 Problem 1. Let  $Z$  be the set of integers. Determine all functions  $f: Z \rightarrow Z$  such that, for all integers  $a$  and  $b$ ,  $f(2a+2b) = f(a)+f(b)$ . (1) (South Africa) Answer: The solutions are  $f(n) = 0$  and  $f(n) = 2n^k$  for any constant  $k \in Z$ . Common remarks. Most solutions to this problem first prove that  $f$  must be linear, before

Problems: Maximum Value Contiguous Subsequence.

Given a sequence of  $n$  real numbers  $A(1) \dots A(n)$ , determine a contiguous subsequence  $A(i) \dots A(j)$  for which the sum of elements in the subsequence is maximized. Making Change. You are given  $n$  types of coin denominations of values  $v(1) v(2) \dots v(n)$  (all integers).

general. So he gave this problem to Frobenius. In order to find a solution of this problem (which we will explain below), Frobenius created representation theory of finite groups. The general content of representation theory can be very briefly summarized as follows. An associative algebra over a field  $K$  is a vector space  $A$  over  $K$  equipped with an ...
