A review of generally accepted applications and coordination of protection for radial power system distribution lines is presented. The Guide examines the advantages and disadvantages of schemes presently being used in protecting distribution lines. Identification of problems with the methods used in distribution line protection and the solutions for those problems are included.

The rating indicates the level of relay's capability to switch the load, including the inrush current. For example, relays for television power supplies need to obtain the TV rating. The switching test (durability test) of these relays is performed using a tungsten lamp as a load and must withstand in total 25,000 times of the durability test.
