A framework for interpreting experiments on Doppler shifts in light scattering from pure liquids and polymer solutions is presented. The spectral density of the light scattered into a given frequency range and angle by a liquid composed of identical, isotropic particles much smaller than the wavelength of the incident light is expressed in terms of the Fourier transform of the two-body space ...

The rheology of polymer solutions

Read PDF Pure Polymer Solutions

is important in several stages of the manufacturing and processing of polymers, such as in the spinning of fibers and the casting of films from solutions, and especially in the paints and coatings industry. The rheology of a polymer solution increases with the polymer concentration.
