Harmonium restoration. I have put this into a separate category as these instruments contain no pipes, so are not, in the historical sense, organs at all. Harmoniums (and American reed organs) produce their sound by passing air through brass reeds causing them to vibrate in sympathy with their length, exactly like accordions and harmonicas.

Gellerman has a very useful book entitled, The American Reed Organ and Harmonium, which not only gives instruction on reed organ restoration, but includes a detailed history of the American reed organ. He also has a detailed chapter on tuning, as well as designs for organ benches, stop face fonts, and much more.

~~Restoring a Reed Organ: Part 3—Resources~~

This book offers an in-depth look into the history of the reed organ. This is the strength of the book. It discusses how the reed organ grew in popularity, why it flourished in the society of its time, and then describes its demise. The restoration information is also good. The workings of the organ are described in a fair amount of detail.

General Reed Organ Information. Below are a couple of dozen points of information that I've done on the reed organ. My guess is that you, like so many other people that own reed organs, don't know a whole lot about what makes them tick. When someone tells me they have an antique organ, a number of organs come to mind. Basically, there are 12 ...

~~General Reed Organ Information—Pump Organ Restorations~~

The pump organ is a type of free-reed organ that generates sound as air flows past a vibrating piece of thin metal in a frame. The piece of metal is called a reed. Specific types of pump organ include the reed organ, harmonium, and melodeon. The idea for the free reed was imported from China through Russia after 1750, and the first Western free-reed instrument was made in 1780 in Denmark.
