The Soft Tissue Release (STR) technique works by changing the origin and insertion points of muscles, before stretching the tissues. The muscles origin and insertion points are altered by the practitioner applying a “ soft tissue lock ” to the tissues under treatment. Once the “ soft tissue lock ” is applied the tissues are then stretched.

How soft tissue release works – Human Kinetics

Soft tissue release is a massage technique that combines manipulation with localised stretching of the tissue. The technique can either be done passively with a therapist applying pressure to the muscle, fascia or tendon whilst performing a stretch to the associated tissue or actively where the therapist just applies the pressure and the patient then actively stretches the muscle.

The purpose of this technique is to elongate the posterior soft tissues of the lumbar or thoracic spines. This technique may serve as an alternative to the forward-bending laminar release in side-lying position. If the patient is too large for the therapist to manage in side-lying, the quadruped position may be used.
