Solids Liquids And Gases Answer

ANSWER. Solids, liquids and gases. Air

is a gas. What are some ways we can see

air? ANSWER. Some possible answers

include: in a bubble, in a balloon, when

it's cold outside, blowing from air

conditioning, bubbles in soda, etc. What

are some examples of solids in our

classroom? ANSWER. Some possible

answers: desk, book, ruler, chair, pencil,

etc.

that a copper wire can be bent shows that some solids do not have a definite shape. False. How are particles at the atomic level arranged within solids? The particles are packed close together and arranged in a regular pattern.

Section 3.1 Solids, Liquids, and Gases

Flashcards | Quizlet

The three main forms of matter are called solid, liquids and gases. Matter is anything that takes up space and has weight. A solid keeps its shape, a liquid takes the shape of its container and a gas fills its container.

Lesson 1 | Solids, Liquids, and Gases

Gases are often invisible and assume the shape and volume of their container. The air we breathe is made up of different gases, but it is mostly nitrogen and oxygen. We can see through some solids like glass. When liquid gasoline is burned in a car, it turns into various gases which go into the air from the exhaust pipe.

Bookmark File PDF Solids Liquids And Gases Answer

When solids are heated, they melt and change into their liquid form. When gases are cooled, they condense and change into their liquid form. The temperature at which a liquid freezes and turns into a solid is known as the liquid's "Freezing Point." The freezing point of water is 0 degree Celsius.

Solids, Liquids and Gases Quiz | Turtle Diary

When the liquid is cooled the movement of its particles will decrease and they will pack themselves into a rigid shape thus forming a solid. Evaporation: In this process a liquid changes into a gas on heating. The particles start moving faster on heating and break free from their existing pattern thus making a gas. Condensation: In this process ...
