A stone tool is, in the most general sense, any tool made either partially or entirely out of stone. Although stone tool-dependent societies and cultures still exist today, most stone tools are associated with prehistoric (particularly Stone Age) cultures that have become extinct. Archaeologists often study such prehistoric societies, and refer to the study of stone tools as lithic analysis.

In Stone Tools in Human Evolution: Behavioral Differences among Technological Primates, John Shea employs a comparative analytical approach. He assesses how the evolution of behavior differs between humans and non-human primates to determine how we should classify the earliest period of tool production and use.
