Application The Carleson Hunt Theorem On

Carleson's theorem is a fundamental result in mathematical analysis

establishing the pointwise almost everywhere convergence of

Fourier series of L^2 functions, proved by Lennart Carleson. The

name is also often used to refer to the extension of the result by

Richard Hunt to L^p functions for $p \in (1, \infty]$ (also known as the

Carleson–Hunt theorem) and the analogous results for pointwise

almost everywhere convergence of Fourier integrals, which can be

shown to be equivalent by transference ...

indicated in Hunt's paper in 1967, Carleson's method can be modified to deal with the functions in L^p -space with $p > 1$. In addition to Carleson's work, Fefferman provides another approach to solve this problem in 1971.

The Carleson Hunt theorem is a fundamental result in mathematical analysis. The Theorem shows that the almost everywhere pointwise convergence of the Fourier series for every $f \in L^p[?;?]$ for $1 < p < \infty$: Historically, a fundamental question about Fourier series, asked by Fourier himself

THE CARLESON HUNT THEOREM

Carleson theorem For a function in $L^2(0, 2\pi)$ its trigonometric Fourier series converges almost everywhere. This was stated as a conjecture by N.N. Luzin and proved by L. Carleson. The statement of Carleson's theorem is also valid for functions in L^p for $p > 1$ (see).

Theorem (Hunt, 1968) If $f \in L^p(\mathbb{T})$ with $p > 1$ then $(S_n f)(x) \rightarrow f(x)$ for almost all $x \in \mathbb{T}$. There's an obvious sense in which Carleson's and Hunt's theorems can't be improved: we can't change 'almost all' to 'all', simply because changing a function on a set of measure zero doesn't change its Fourier coefficients.

Carleson-Hunt Theorem on \mathbb{R} . If $f \in L^p(\mathbb{R})$ with $p > 1$ then $f(x) = \lim_{\delta \rightarrow 0} \int_{x-\delta}^{x+\delta} f(t) dt$ almost everywhere. This seems clearly wrong to me, because if $p > 2$ then f^\wedge is just a tempered distribution, so those integrals are undefined.

The celebrated Carleson-Hunt theorem asserts that if f is an function for some, then the partial Fourier series of converge to almost everywhere. (The claim fails for, as shown by a famous counterexample of Kolmogorov.) The theorem follows easily from the inequality
