Cognitive tasks that make humans and software-driven machines substitutes, rather than complements.

The Second Machine Age - Wikipedia

The Second Machine Age tries to do two things at once, and does both of them passably well, though with the authors sympathies clear (in believing in the inexorable advance of technology, and the concept that such advances are good enough that any sort of centrally acting control of the advances themselves in the form of effective governance should be absent or muted, and that such central control should instead focus on mitigating the consequences of these advances), there is an incredible

Those technologies did physical work. According to economists Erik Brynjolfsson and Andrew McAfee, we’ve entered “the second machine age.” This age is characterized by computers, automated machines, and artificial intelligence. These technologies do mental work. To quote Brynjolfsson and McAfee, Now comes the second machine age.

Now comes the second machine age. Computers and other digital advances are doing for mental power—the ability to use our brains to understand and shape our environments—what the steam engine and its descendants did for muscle power. They're allowing us to blow past previous limitations and taking us into new territory.
