To safely repair your tire, the puncture must be 1/2 inch away or more from the edge of the tire tread where the internal steel belt begins. Any puncture less than 1/2 inch from the start of the internal steel belt on the shoulder or sidewall of the tire cannot be repaired (shown in the red area of the diagram).

Flat Tire Repair Guidelines - Discount Tire

The only way to properly repair a tire is to demount it from the rim so it can inspected on the inside, remove the damaged material, fill the void with rubber, and seal the innerliner with a repair unit.

Tire Repair | TIRE INDUSTRY ASSOCIATION

The second consideration when evaluating if a tire can be repaired is to confirm the size, type and location of the damage. Industry guidelines allow repair of punctures of up to 1/4" in diameter in a tire's tread area. Some manufacturers limit the number of repairs ...

Tire Repair Guidelines at Tire Rack

When repairing a tire, keep in mind the following criteria: Tires must be removed from the rim/wheel assembly and inspected for all possible damage—including damage to the inner liner. Tire repairs cannot overlap with other repairs. A rubber stem, or plug, must be applied to fill the puncture injury and a patch must be applied to seal the inner liner.

Tire Repair Basics | U.S. Tire Manufacturers Association

A tire can be repaired if: It is punctured within the puncture repair area of the tire (pictured under the "non-repairable tire" section below) The sidewall and the shoulder of a tire cannot be repaired per TIA and USTMA guidelines The puncture doesn't measure more than 1/4 of an inch in diameter

Proper Tire Repair | Sullivan Tire & Auto Service

The three essential sets to repairing a tire correctly include properly evaluating the object that caused the puncture (damage), reestablishing an airtight seal of the tire's inner liner, and completely patching the entire damaged area of the tire.

Tire Repair Regulations | It Still Runs

Consult your tire repair professional to determine if a tire is repairable and always have a professional perform the repair. If any of the following conditions exist, the tire cannot be repaired: A tire worn below 2/32" (1.6 mm) Tires with tread punctures larger than 1/4" (6.35 mm)

When Your Tire Can be Replaced & How It's Done

Guidelines allow the repair of punctures in a tire's tread area of up to 1/4" in diameter. Repair of larger tread punctures and of punctures to the tire's shoulder and sidewall areas are not recommended. There are three primary considerations when repairing a punctured tire.

Flat Tire Repairs | Tire Rack

Each tire manufacturer specifies USTMA tire repair procedures must be followed precisely to have any tire repair deemed proper. While basic USTMA tire repair procedures remain the same for run-flat tires as non-run-flat tires, many tire manufacturers have issued specific policies that supersede USTMA's standard reparability policies.

U.S. TIRE MANUFACTURERS PUNCTURE REPAIR AREA . Title: RMA_TireProc_2p_5 Author: G5 Created Date: 8/24/2017 4:11:41 PM

U.S. TIRE MANUFACTURERS PUNCTURE REPAIR AREA

The proper repair of a radial tire includes the placing of a rubber patch on the inner liner of the tire and a rubber filling of the hole by a professional. Do not attempt to have repaired tires with tread punctures larger than 1/4" or any sidewall puncture. Also, do not have tires repaired that are worn below 2/32" tread depth. Wear on Both Edges

Tire Wear & Damage | Michelin

A properly repaired speed rated tire (per the tire manufacturer's recommendations) can be used for legal highway service, just as a properly repaired non-speed rated tire. ONLY SPECIALLY TRAINED PERSONNEL USING THE PROPER TOOLS AND PROCEDURES SHOULD REPAIR TIRES. NEVER repair tires with a tread puncture larger than 1/4" (6mm).

PUNCTURE REPAIR PROCEDURES FOR PASSENGER AND LIGHT TRUCK TIRES

perform a tire repair without removing the tire from the rim/wheel assembly for internal inspection. (Do not perform an outside-in tire repair or on-the-wheel repair). It is essential that only a specially trained person remove any tire from the wheel when it has been damaged or is losing air.

PUNCTURE REPAIR PROCEDURES - Raben Tires and Service

A service professional should inspect the tire inside and out to determine whether it can be repaired or needs to be replaced. Flat-tire repair services may help to: Properly repair punctures in the tread. Prevent further tire damage. Maintain tire air pressure at manufacturer-recommended levels.

Flat Tire Repair Service | Goodyear Tires

Tire Care Essentials Pressure, tread, rotation, alignment—these are the top four when it comes to ongoing tire maintenance. Spending a little time on these essentials every month and every few thousand miles will help your tires keep you safe.

Safety page | U.S. Tire Manufacturers Association

Studies of tire safety show that maintaining proper tire pressure, observing tire and vehicle load limits (not carrying more weight in your vehicle than your tires or vehicle can safely handle), avoiding road hazards, and inspecting tires for cuts, slashes, and other irregularities are the most important things you can do to avoid tire failure such as tread separation or blowout and flat tires.

Tire Safety: Everything Rides On It | National Highway ...

In your tire plug kit, you'll see a tool that looks like a round file with a handle. This is used to clean out and rough up the hole in your tire prior to plugging. Take this tool and ram it into the hole. Move it up and down a few times to roughen up the inside. A few solid pumps should do it. This is an important part of the tire repair.

How to Plug a Tire and Quickly Fix Your Flat

Consult tire manufacturer for their repair policy and, if applicable, for their recommended repair procedures. • Industry recommended repair methods include: (1) Two-piece stem and patch repair components, and (2) one-piece patch/stem combination repair units.
