Appropriate for a one-semester course on both general and algebraic topology or separate courses treating each topic separately. This text is designed to provide instructors with a convenient single text resource for bridging between general and algebraic topology courses. Two separate, distinct sections (one on general, point set topology, the other on algebraic topology) are each suitable for a one-semester course and are based around the same set of basic, core topics.

~~Topology: a first course | James Munkres | download~~

In the first case $x \in A$ and $y \in B$ so that clearly $x \in A \cap C$ and $y \in B \cap D$. Hence $(x, y) \in (A \cap C) \times (B \cap D)$. In the second case we have $x \in C$ and $y \in D$ so that again $x \in A \cap C$ and $y \in B \cap D$ are still both true. Hence of course $(x, y) \in (A \cap C) \times (B \cap D)$ here also.

TOPOLOGY RON LIVNE' The main reference is Munkres, Topology: a First Course. 1. Basic definitions 1.1. Metric Spaces. A metric space $(X;d)$ is a set X and a map $d: X \times X \rightarrow \mathbb{R}$ satisfying for all $x,y,z \in X$ (1) $d(x;y) \geq 0$ with $d(x;y) = 0$ iff $x = y$ (non-negativity). (2) $d(x;y) = d(y;x)$ (symmetry). (3) $d(x;z) \leq d(x;y) + d(y;z)$ (triangle inequality).
