Both cars were manufactured from 1968 to 1974. The type 4 was introduced at the Paris Motor Show in October 1968. At that point, the 411 was VW's largest passenger vehicle with the company's largest motor (class: mid-size, large family car). Both 411 and 412 models were air-cooled, had rear placement, rear-wheel drive and a boxer engine.

Building a 'Big' Aircooled VW Engine (Type 1) This article is a guide to the theory and choices involved in building performance engines for Aircooled VWs (Type 1). There are careful decisions to be made with regard to the engine size and components that are "right" for what you have in mind.

VW Performance Engine Building: Considerations

The reason they called for a straight 40 weight was that, at the time, it would offer the best protection in a hotter running air-cooled engine on hot days and high engine loads. The kinematic viscosity, e.g. 10W-40 determines flow rate, and you want good flow to keep things cool.

The basic VW air-cooled engine. In the VW design, the engine block is a two-piece crankcase made of pot metal aluminum alloy. The camshaft is captive in the crankcase, underneath the crankshaft. Miraculously, the crankcase seals well enough to keep the oil from leaking too much, although these engines all develop leaks over time.

The Venerable VW Air-Cooled Engine

The cars retained VW's trademark air-cooled, rear placement, rear-wheel drive, boxer engine with a front/rear weight distribution of 45/55% and a forward cargo storage 400 L (14.1 cu ft) — while also introducing design and engineering departures for the company — including a completely flat passenger area floor and suspension using control ...
