Try to find roots with a transitional area, from living to dead. Look for white or cream colored roots that transition to brown or black. Some woody ornamental plants have naturally dark roots. Using your fingernail, peel away the outer layer of the roots to expose root tissue and to check for color. Do not add water to the bag.

Woody Ornamental Plants | PPDC

Woody ornamental plants are the living, structural components of a well-landscaped yard. They are long-lived perennials with stems and branches that increase in girth and height each growing season. Unlike herbaceous plants that die back to the ground in winter, woody ornamentals remain aboveground year-round. In the landscape, woody ornamentals serve many essential functions.

Manual of Woody Landscape Plants: Their Identification ...

Woody ornamentals should only be dug before leafing-out in Spring or following Autumn leaf drop. Unless the root ball is very large, such as with a tree spade, woody ornamentals should not be transplanted during active growth or the heat of the summer. Installing a pre-dug, balled & burlapped or containerized plant can be done at almost all other times.

Woody Plants - Landscape Designs

Two ornamental plants in the landscape that are commonly sheared are liriop and ornamental grasses such as pampas grass. Shearing in late winter removes old growth and makes way for new shoots. An efficient way to prune liriop is with the lawn mower set at the highest possible setting.
